

Recruitment Gorilla — User Guide

Welcome! Recruitment Gorilla is the in-house applicant tracking system (ATS): recruiters upload CVs, the system extracts candidate details, and every candidate moves through a configurable hiring pipeline — from **Uploaded** all the way to **Recommended** — with interviews, structured evaluations, dashboards and a full audit trail along the way.

This guide is organized **by role**. Read the *Getting started* chapter first, then jump to the chapter for your role. Every capability of a lower role is also available to the roles above it.

Contents

- Chapter 0 — Getting started (*everyone*)
- Chapter 1 — Interviewer guide
- Chapter 2 — Recruiter guide
- Chapter 3 — Admin guide
- Chapter 4 — SuperAdmin guide
- Chapter 5 — Appendix (*permission matrix, pipeline map, FAQ*)

The four roles at a glance

Roles form a strict hierarchy — each role can do everything the roles below it can:

SuperAdmin → Admin → Recruiter → Interviewer

Role	In one sentence
Interviewer	Sees the interviews assigned to them and submits structured evaluations.
Recruiter	Owns candidates: uploads CVs, maintains profiles, and moves candidates through the pipeline for the job openings they are assigned to.
Admin	Everything a Recruiter does, on <i>all</i> candidates — plus configuration, candidate deletion, and the audit trail.
SuperAdmin	Everything — plus managing user accounts and deleting job openings.

A user can hold **more than one role** at once; their access is the union of all of them.

A note on screenshots: the screenshots in this guide were taken with demo accounts ("Demo Recruiter", "Ayesha Rahman" etc.). Your own screens will show your organization's real data, but the layout is identical.

Chapter 0 — Getting started

For everyone. This chapter covers signing in, your first login, and the parts of the app that look the same for every role.

0.1 Signing in

Open the application in your browser and you'll land on the sign-in page. Log in with your **email address** and the password provided by your administrator.

- Sessions are kept alive automatically in the background; you won't be asked to log in again until your session genuinely expires or you sign out.
- Use **Sign out** (top-right) on shared machines — it fully revokes your session.

0.2 First login — you must set a new password

Accounts are created by a SuperAdmin with a **temporary password**. The first time you sign in (and after any admin password reset), the app takes you straight to the *Change password* screen and will not let you go anywhere else until you set your own password:

Change password

You must set a new password before continuing.

Current password *

New password *

At least 8 characters.

Confirm new password *

Update password

1. Enter the temporary password you were given as **Current password**.
2. Choose a new password (at least 8 characters) and confirm it.
3. Click **Update password** — you're then taken into the app.

You can change your password again at any time by clicking **your name** in the top-right corner.

0.3 Finding your way around

The navigation bar adapts to your role — you only see the menu items you can use:

Menu item	Visible to
Dashboard	everyone
Upload CVs, Candidates	Recruiter and above
Configuration, Audit	Admin and above
Users	SuperAdmin only

On the right side of the navbar you'll find, in order:

-  **Notifications** — a bell with an unread-count badge. You get an in-app notification when you're assigned to an interview, when an interview is re-scheduled, and for similar events. Click the bell to open the list; clicking a notification takes you to the relevant page.
-  /  **Theme toggle** — switches between light and dark mode. Your choice is remembered.
- **Your name** — click it to open the change-password page.

- **Sign out.**

0.4 The dashboard

Everyone lands on the **Dashboard** after signing in. It shows a personalized greeting with "what needs your attention" chips, organization-wide numbers (total candidates, in process, recommended, rejected, new this week, referred), a status breakdown, an applications trend chart, and the **Active Job Openings** table.

What else appears depends on your role:

- **Interviewers** get a **My interviews** card listing their assigned interviews with a *Pending / Submitted* evaluation state.
- **Recruiters** additionally get sections scoped to *their* candidates, with a **role filter** to focus on one of their assigned job openings.
- **Admins / SuperAdmins** see the organization-wide view across all candidates.

Chapter 1 — Interviewer guide

You are the evaluation specialist. Your job in the system: review the candidates assigned to you, conduct the interview, and submit a structured evaluation. Recruiters cannot mark an interview as completed until at least one interviewer has submitted an evaluation — so the pipeline literally waits for you.

1.1 What you can (and can't) see

As an Interviewer you see the **Dashboard** and the **interviews assigned to you** — nothing else. You can't browse the full candidate list; instead, each assigned interview gives you a **read-only snapshot** of exactly the candidate you're interviewing, including their CV.

1.2 Your interviews

Your Dashboard shows a **My interviews** card with every interview you've been assigned:

- Each row shows the candidate, the job opening, the scheduled date/time, and your evaluation state: **Pending** (you still need to submit) or **Submitted**.
- The greeting chips at the top tell you at a glance how many evaluations you still owe and when your next interview is.
- You'll also receive a **notification** whenever you're assigned to a new interview or an interview is re-scheduled.

Click a row to open the interview page.

1.3 The interview page

The interview page has everything you need in one place:

🎯 Summary & recommendation

General assessment

Strengths / areas for improvement / red flags

Final recommendation *

☐ Recommended:

Meets requirements; good fit.

☒ Hold:

Potential fit, but have reservations or other candidates to review.

☐ Reject:

Does not meet requirements.

☐ Other:

Specify below.

Overall rating *

12345

Save draft

Submit

Header — candidate name, the job opening, the interview-type tags (e.g. *Technical*, *HR*, *1st Level*), the scheduled time with a countdown, and the interviewer panel.

Notes from the recruiter (blue box) — anything the recruiter wants you to know before the interview: focus areas, candidate preferences, context from previous rounds.

Candidate snapshot (left column) — current title, contact details, relevant experience, skills, CV summary, and the CV file itself with **Preview** and **Download** buttons.

Interview Evaluation (right column) — the structured evaluation form, described next.

1.4 Filling in the evaluation

The evaluation has **12 criteria in four sections**, each rated on a **1–5** scale, each with an optional comments box:

- **A. Educational & Professional Background** — relevance of experience, job stability & progression, educational background.
- **B. Technical Skills & Job Knowledge** — core technical competency, tools & software proficiency, problem-solving skills.
- **C. Soft Skills & Communication** — communication clarity, listening skills, adaptability & flexibility.
- **D. Cultural Fit & Motivation** — alignment with company values, motivation & enthusiasm, team dynamics.

Below the sections, the **Summary & recommendation** block asks for:

- **General assessment** — free text: strengths, areas for improvement, red flags.
- **Final recommendation** (*required*) — one of **Recommended** / **Hold** / **Reject** / **Other** (Other requires you to specify).
- **Overall rating** (*required*) — your single 1–5 verdict for the candidate.

1.5 Draft vs. Submit — the important difference

Button	What it does
Save draft	Saves whatever you've entered so far — no fields are required. Come back anytime and continue.
Submit	Finalizes your evaluation. All 12 criteria must be rated , and a final recommendation and overall rating must be chosen.

 **Submitting is final.** Once submitted, your evaluation is locked and can no longer be edited — the recruiter and admins will see it exactly as submitted, and it appears in the candidate's status history as an evaluation card. Use *Save draft* until you're sure.

Chapter 2 — Recruiter guide

*You run the pipeline. As a Recruiter you upload CVs, maintain candidate profiles, and move candidates step by step from **Uploaded** to **Recommended** — scheduling interviews and acting on interviewer evaluations along the way.*

2.1 Which candidates you can see

You can access a candidate when **either** of these is true:

1. **You created them** (you are the *owner*), or
2. **You are an assigned recruiter of the candidate's job opening** — an Admin assigns recruiters to each job opening in Configuration. Every candidate under that opening is then yours to manage, *no matter who created them*, and an opening can have several recruiters (all of them get access).

Everything scopes to this rule: the candidate list, candidate details, CV files, editing and status changes, and your dashboard sections.

Two limits to be aware of:

- **You cannot delete candidates** — not even your own. Deletion is Admin/SuperAdmin-only; ask an Admin if a record must be removed.
- **You need at least one assigned job opening (or your own candidates) to work with.** If your "Role applied for" dropdown is empty when creating a candidate, ask an Admin to assign you to an opening.

2.2 Your dashboard

Besides the organization-wide numbers, your dashboard has sections scoped to **your** candidates, with a **role filter** to focus on one of your assigned job openings (or *All*):

2.3 Adding candidates — Upload CVs

Go to **Upload CVs** (navbar or the button on the Candidates page):

1. **Drag & drop** one or more CV files (PDF or Word `.docx` , up to 10 MB each), or click to browse.
2. The system **parses each CV** and pre-fills a candidate form: name, email, phone, LinkedIn, skills, summary. Review and correct the extracted values — parsing is a head start, not a guarantee.
3. Fill in the required fields (marked with a red `*`): **Full name**, **Email**, **Relevant experience**, and **Role applied for** — the dropdown offers only the job openings you're assigned to (auto-selected when you have exactly one).
4. Optionally add **skill tags**, a summary, links, and mark the candidate as **referred** (with the referrer's details).
5. Save — the candidate is created with the initial status **Uploaded**, and the CV file is attached to their profile.

If a candidate with the same email already exists you'll be warned about the duplicate before anything is created.

2.4 The candidate list

Candidates shows every candidate you can access, with search (name or email) and a status filter:

 [Dashboard](#) [Upload CVs](#) [Candidates](#)

Profile matches the QA opening well — sending the take-home assessment.
- Uploaded

Jul 15, 2026, 11:26 AM · Demo Recruiter

CV received via referral from engineering team.

- **Profile** — edit any field and click *Save changes*. Required fields are marked *.
- **CV files** — **Preview** the CV in the browser or **Download** it.
- **Status history** (right) — the full journey, newest first. Each entry shows the status badge, when and **who** made the change, the comment, and any structured details: the assigned task, the submission link, interview date/time, interview-type tags, the interviewer panel, and — after an interview — **evaluation summary cards** (see 2.7).

If the job opening's **End Date** has passed, the opening is locked: profile edits and status changes are blocked (for everyone) until an Admin extends the End Date.

2.6 Moving a candidate through the pipeline

At the top of the Status history panel, pick a **New status** and (optionally) add a comment, then click **Add status**. Only the statuses that are *legal from the current status* are offered. The main path is:

Uploaded → Ask for Assessment → Technical Assessment → Submission Received
→ Code Review → Call for Interview → Interview Scheduled
→ Interview Completed → Recommended

At most steps you can also branch to **Not Available**, **Reject**, **Discontinued** or (after code review / interview) **Not Recommended**.

Some statuses require extra fields — the form asks for them automatically:

Moving to...	You must provide
Technical Assessment	the task details the candidate must complete
Submission Received	the submission URL
Interview Scheduled	date & time , at least one interviewer , plus optional interview-type tags and notes
Interview Completed	a comment , and at least one interviewer must have submitted their evaluation

2.7 Scheduling interviews

When you select **Interview Scheduled**, the form expands:

- **Interview date & time** (*required*).
- **Interviewers** (*required, one or more*) — every assigned interviewer sees the interview on their dashboard and gets a 🛎 notification.
- **Interview type tags** — e.g. *Technical, HR, 1st Level, 2nd Level* (Admins maintain this list). The tags appear color-coded in the status tree and on the interviewer's page.
- **Comment** — this becomes the "**Notes from the recruiter**" box the interviewers see on their interview page. Use it for focus areas and context.

Completing an interview

After the interview, move the candidate to **Interview Completed**. This is **gated**: at least one assigned interviewer must have *submitted* their evaluation first. The completed entry then shows **evaluation summary cards** — one per submitted evaluation, with the interviewer, their recommendation and overall rating; click through to the full evaluation (Admin+ can open all evaluations; you see the summaries).

Re-scheduling another round

Need a second round? From **Interview Completed** you can move the candidate back to **Interview Scheduled** — a fresh interview with its own date, panel and tags. The history keeps both rounds, so nothing is lost:

Recruitment Gorilla — User Guide · Page 16 of 26

2.8 Closing the loop

When the panel is positive, move the candidate to **Recommended** — the end of the pipeline (hand-off to the offer process happens outside the system today). Otherwise use **Not Recommended**, **Reject**, **Not Available** or **Discontinued** as appropriate, with a comment explaining why — the history is the institutional memory of the decision.

Chapter 3 — Admin guide

*You keep the system running for everyone else. An Admin can do everything a Recruiter can — on **all** candidates, not just assigned ones — plus maintain the configuration (job openings, skills, interview types), delete candidates, and review the audit trail.*

3.1 What Admin adds on top of Recruiter

Capability	Notes
See & manage all candidates	no ownership/assignment scoping
Delete a candidate	permanent — removes the profile, history and CV files
Configuration page	job openings, skills, interview types
Audit page	the who-changed-what-when log
Open full evaluations from a candidate's history	recruiters see only the summary cards

Read the [Recruiter guide](#) first — day-to-day candidate work is identical.

3.2 Configuration

Configuration (navbar) has three sections on one page:

Configuration

Roles applied / Job openings

[Add role](#)

Role Name	Title	Location	Department	Recruiter	Posted	End date	Order	Status	Actions
Backend Engineer	Backend Engineer — 29 Jun 2026	Office	—	Recruiter	Jun 29, 2026	Dec 30, 2027, 6:00 PM	1	Active	Edit
Frontend Engineer	Frontend Engineer — 29 Jun 2026	—	—	—	Jun 29, 2026	Dec 31, 2027, 12:00 AM	2	Active	Edit
Full Stack Engineer	Full Stack Engineer — 29 Jun 2026	—	—	—	Jun 29, 2026	Dec 31, 2027, 12:00 AM	3	Active	Edit

[Add interview type](#)

Name	Order	Status	Actions
Technical	1	Active	Edit Delete
HR	2	Active	Edit Delete
Managerial	3	Active	Edit Delete
1st Level	4	Active	Edit Delete
2nd Level	5	Active	Edit Delete
Final Round	6	Active	Edit Delete

Roles applied / Job openings

Each job opening drives a lot of behavior, so fill it in deliberately:

- **Name, sort order, active** flag — inactive openings disappear from the candidate form dropdown but keep their history.

- **End Date** (*required*) — after this date the opening **locks**: no profile edits or status changes for its candidates (for anyone) until you extend the date. Use it to freeze closed positions.
- **Location** (Remote / Office / Hybrid / Contractual), **Department** (Engineering / Admin / HR), **Priority** — shown on the dashboard's Active Job Openings table.
- **Recruiters** — assign one or more recruiters to the opening. **This is how recruiters get access to candidates**: an assigned recruiter can manage *every* candidate under the opening, regardless of who created them. Keep this list current when people change positions.

Deleting an opening is **SuperAdmin-only**; an opening that already has candidates is soft-disabled instead of deleted (the app tells you how many candidates block it).

Skills

The tag list offered on candidate profiles. Add, rename, deactivate. Skills already attached to candidates survive a deactivation; a skill with no usage can be removed outright.

Interview Types

The tags recruiters attach when scheduling interviews (*Technical, HR, 1st Level, 2nd Level, ...*). They're color-coded automatically and appear in the status tree and on the interviewer's page. Maintain them the same way as skills.

3.3 Deleting a candidate

On the candidate list or detail page you (unlike recruiters) have a **Delete** button. It asks for confirmation, then permanently removes the candidate, their status history and CV files. The deletion itself is recorded in the audit trail — the *fact* that you deleted "Jane Doe (#44)" remains answerable forever.

3.4 The audit trail

Audit (navbar) answers "who changed what, when" across the whole system:

Every write is recorded: logins (including **failed** login attempts), password changes, candidate create/update/delete and every status change, evaluation submissions, configuration changes, and user management. Each row shows the **time**, the **actor**, a color-coded **action** badge (e.g. `Candidate.Deleted`, `Auth.LoginFailed`), the affected **entity**, and a human-readable summary.

Use the filter bar to narrow by **entity type**, **action** (contains-match, e.g. Deleted), and a **from/to** date range; results are paginated newest-first.

Typical questions it answers:

- *Who deleted this candidate?* → Entity type **Candidate**, action Deleted .
- *Has anyone been trying to guess passwords?* → action LoginFailed .
- *What did this user change yesterday?* → date range + scan the actor column.

The log is **append-only** — nobody, including admins, can edit or remove entries.

Chapter 4 — SuperAdmin guide

You own the accounts. A SuperAdmin can do everything an Admin can, plus manage user accounts and roles, reset passwords, and delete job openings.

4.1 What SuperAdmin adds on top of Admin

Capability	Notes
Users page	create users, assign roles, activate/deactivate, reset passwords
Delete a job opening	Admins can only edit/deactivate openings

4.2 Managing users

Users (navbar) lists every account with name, email, role badges, active status, last login, and per-row actions:

 Dashboard Upload CVs Candidates Configuration Audit **Users**

  Md Tahmidul Abedin Sign out

Users

Add user

Name	Email	Roles	Status	Last login	Actions		
Demo Admin	demo.admin@rg.local	Admin	Active	7/15/2026, 11:29:42 AM	Edit	Reset password	Deactivate

Super Admin	admin@recruitmentgorilla.com	Admin	Active	6/30/2026, 12:46:43 PM	Edit	Reset password	Deactivate

Creating a user

Click **Add user** and provide:

- **Name** and **email** — the email is the login and must be unique.
- **Roles** — one or more of SuperAdmin / Admin / Recruiter / Interviewer. A user's access is the union of their roles.

- **Temporary password** — share it with the user through a secure channel. They will be **forced to set their own password on first login** (see [Getting started §0.2](#)).

Choosing the right role

- Someone who only conducts interviews → **Interviewer**.
- Someone who sources and manages candidates → **Recruiter** — then have an Admin **assign them to job openings** in Configuration, or they won't see any candidates they didn't create.
- Someone who maintains openings/skills or needs to see everything → **Admin**.
- Keep **SuperAdmin** to the smallest possible group.

Edit / deactivate

Edit changes a user's name and roles. **Deactivate** blocks the account from signing in (and from being assigned to interviews) without deleting anything — history keeps their name. Role changes and deactivation take effect on the user's next token refresh (within minutes), not just at next login.

Guard rail: the system refuses to deactivate or strip the role of the **last active SuperAdmin**, so you can't lock everyone out.

Password resets

Reset password sets a new temporary password (shown once — pass it on securely). The account is flagged so the user must choose their own password at their next sign-in. The reset is recorded in the audit trail.

4.3 Deleting job openings

Only SuperAdmins can delete an opening in **Configuration**. If candidates were ever filed under it, the opening is deactivated instead of deleted and the app reports the candidate count — history is never silently destroyed.

4.4 Habits that keep the system healthy

- Review the **Audit** page occasionally for `Auth.LoginFailed` bursts and unexpected `User.*` / `Role.*` changes.
- Deactivate accounts of people who leave — don't just let them go stale (the **Last login** column shows who's inactive).
- Keep each opening's **recruiter assignments** and **End Date** current — they drive both access and the pipeline lock.

Chapter 5 — Appendix

5.1 Full permission matrix

5.2 The pipeline map

5.3 FAQ

I'm a Recruiter and I can't see a candidate I know exists. You can only see candidates you created or that belong to a job opening you're assigned to. Ask an Admin to add you as a recruiter of that opening (Configuration → the opening → Recruiters).

The "Role applied for" dropdown is empty when I create a candidate. Same cause — you have no assigned openings yet. An Admin needs to assign you to at least one.

I can't change a candidate's status or save profile edits — everything is rejected. Check the job opening's **End Date**: once it passes, the opening locks for everyone. An Admin must extend the End Date to unlock it.

Why can't I move the candidate to "Interview Completed"? At least one assigned interviewer must **submit** (not just draft) their evaluation first. Chase the panel — their dashboard shows the evaluation as *Pending*.

The interviewer says they can't edit their evaluation anymore. Submitted evaluations are locked by design. If another round is genuinely needed, re-schedule (Interview Completed → Interview Scheduled) — the new interview gets a fresh evaluation.

I deleted a candidate by mistake. Can it be undone? No — deletion is permanent (that's why it's Admin-only and confirmed). The audit trail still records who deleted what and when, but the data itself is gone.

Why was I sent to "Change password" and can't go anywhere else? Your account has a temporary password (new account or admin reset). Set your own password and the app unlocks.

Who can see the audit trail? Is my activity in it? Admins and SuperAdmins. Yes — every login (including failed attempts), status change, edit, deletion, evaluation submission and configuration change is recorded, append-only.

Can one person be both Recruiter and Interviewer? Yes. Roles combine — a user holding both can manage their candidates *and* be assigned to interview panels.

Does the candidate get any email from the system? Not yet — notifications are in-app only. Communicating with candidates currently happens outside the system.
